INVITATION TO THE 14TH ICMGP 2019

It is with great pleasure that I invite you, on behalf of the Scientific Steering Commitee, to the 14th International Conference on Mercury as a Global Pollutanat (ICMGP 2019). We look forward to welcoming you in Krakow, the city that has traditionally been one of the leading centers of Polish and European academic, cultural and artistic life. The ICMGP 2019 Conference will be a very important step in assessing the completeness of our knowledge on mercury as a global environmental pollutant on one side, and implementation of solutions to reduce the emissions and exposure to this pollutant on the other side. In this way, the Conference will be the first major event of testing the efficiency of implementation of the Minamata Convention in various parts of the world. Needs for improvement of our knowledge on mercury in the environment, as well as measures of improvement of the Minamata Convention implementation efficiency will be discussed. Therefore, the theme of the ICMGP 2019 is:

Bridging knowledge on global mercury with environmental responsibility, human welfare and policy response.

We truly believe that the ICMGP 2019 Conference will be the main place to review our knowledge on mercury research and implementation of its results for reduction of our exposure to this dangerous pollutant. The Conference will also be the place to define future research avenues and policy directions for meeting the targets presented in the various environmental programs and organizations aiming at lowering the presence of mercury in the environment, with a prominent example of the Minamata Convention.
The 14th ICMGP will be organized in a newly opened international ICE Krakow Congress Centre, which easily accomodate the anticipated number of participants of about 1000. Krakow is already gearing up to welcome the participants of the 14th ICMGP in 2019.

Mark your calendars for September 8-13, 2019 and observe the progress of Conference organization at conference website!

Prof. Józef Pacyna

The Chairman of the ICMGP 2019

The ICMGP 2019 main themes:

- How is mercury cycling changing on the global, regional and local scales in response to perturbations caused by major anthropogenic drivers of the environmental change.
- What is the relative risk of mercury exposure to human health and wildlife in the context of human welfare?
- How can technological development contribute to the reduction of mercury exposure and improvement of environmental responsibility? How will industry achieve more control of Hg emissions, handle waste products, and clean up contaminated site?
- How can scientific knowledge contribute to the implementation and effectiveness evaluation of the Minamata Conventions and other regulatory agreements? Importance of integration and implementation of emerging and future mercury research into the policy making.
