

**FUTURE EARTH COASTS** | a project to support sustainability and adaptation to global change in the coastal zone

Future Earth Coasts provides a platform for networking and providing 'added value' to the outputs of our community to explore and understand the drivers and social-environmental impacts of global environmental change in coastal zones.

FEC has produced the **OUR COASTAL FUTURES** strategy to promote action towards the sustainable development of the world's coasts.

Our goal is to strengthen the science-policy interface and contribute to securing sustainable coastal futures in the new epoch called the Anthropocene. We aim to develop a scientific and technological community from all disciplines for the co-design and co-production of knowledge that will engage with policymakers, business, industry and other stakeholders.
